

Press Release – New Product

New Rudder and Elevator Hinge Bushings from McFarlane Solve the Cessna Fit Problems

Baldwin City, Kansas, August 28, 2009 - McFarlane Aviation Products received FAA-PMA approval for rudder and elevator bushings and bearings for Cessna aircraft models 120 through 177. McFarlane supplies two bushing sizes for each hinge location. This allows a selective fit and solves the common Cessna fit and interference problems. The improved bushings are made from hardened stainless steel for long life and corrosion resistance.

McFarlane offers convenient kits that contain all bushings, sintered bronze bearings and hardware for one aircraft. Kits save time and money because McFarlane has done all of the tedious work to research the part numbers and quantities required for each aircraft.

McFarlane's quality is second to none in the aircraft industry. You can rest assured that you're installing the safest and highest quality parts available. All McFarlane parts are fully traceable. Authenticity or production history of any McFarlane part may be verified free of charge at any time.

McFarlane Aviation Products has provided general aviation with high quality replacement aircraft parts at an affordable price for over 20 years. For more information, go to www.mcfarlaneaviation.com or call 800-544-8594 or 785-594-2741.
