## **McFarlane Offers Stabilator Cable Kits for Piper Aircraft**

Baldwin City, Kansas, November 15, 2013 – McFarlane now offers Stabilator Cable Kits for many of the Piper aircraft affected by AD 2013-02-13. The AD requires the inspection of the horizontal stabilator control system with replacement of cables and related hardware as necessary, due to the possibility of failure as a result of stress corrosion cracking in the cable terminals.

“The guesswork in determining the correct cables and common hardware needed to comply with the AD has been eliminated”, said Dave McFarlane. “The kit addresses the AD, and is offered at a discount compared with purchasing the individual items separately”.

McFarlane Aviation Products has provided general aviation with high quality flight control system replacement parts at affordable prices for many years. For more information, visit [www.mcfarlaneaviation.com](http://www.mcfarlaneaviation.com) or call 800-544-8594 or 785-594-2741.
