Press Release – New Product

For Immediate Release

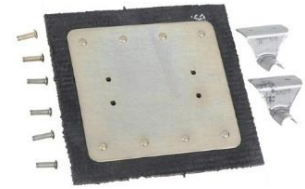

McFarlane Finally Has New Cessna Air Box Assemblies for Cessna 152, 172, 180, 182 & 188 Aircraft

Baldwin City, KS, March 6, 2019: McFarlane announced that new FAA-PMA air boxes made by Acorn Welding are in stock. You can now get rid of that tired, over repaired, old fatigued air box and install an entirely new assembly that is a direct replacement! Rebecca Oberly, McFarlane Sales Representative, says “with a new FAA approved air box owners will have shorter down time and a longer service life for about half the cost of the original parts.”

She went on to explain that “the new air boxes include the McFarlane vibration absorbing bearings that eliminate future bearing and shaft wear while reducing vibration cracking. The reduced vibration motion with the improved bearings prevent the butterfly assembly from wearing into the box structure. No more needle bearings!”

The McFarlane Tech support guys said “any damaged components, mis-repair and inferior fatigued seals can come loose and block airflow in the carburetor.” They also explained that Acorn Welding Air Boxes are approved by a Transport Canada Parts Design Approval and ship with a Form One. This approval is valid as a direct replacement in the U.S. with no STC required.

Replacement components including new flanges, butterfly valves, and seals are available separately for field repairs.

McFarlane Aviation Products has provided general aviation with high quality replacement aircraft parts at an affordable price for over 30 years and was awarded the prestigious 2018 Kansas Governor’s Award of Business Excellence!
