McFarlane Aviation Products announces NEW FAA-PMA fuel system components for Cessna aircraft

Baldwin City, KS, September 14, 2018: McFarlane Aviation Products is excited to announce new product approvals for Cessna aircraft!

McFarlane has developed a unique new Teflon®/Viton® gasket kit for Cessna fuel caps that stops leaking and makes them easy to open! Sometimes it can feel as if you will break your wrist attempting to loosen a fuel cap with the original Cessna seals. That doesn't have to be the case any longer because the new McFarlane low friction fuel cap gasket kits feature a unique triple gasket slip ring arrangement combined with the FAA approved instructions for adjusting the tension spring built into the cap. "Opening and closing the fuel caps is fun again with this new system" says John Cowan, Sales Manager for McFarlane, "They feel so good you will want to open and close the caps a couple of extra times."

McFarlane has also expanded its product approvals to include gaskets at the fuel filler neck for many Cessna aircraft and fuel strainer (gascolator) for the Cessna restart aircraft. McFarlane's FAA-PMA fuel strainer gaskets utilize a fuel proof Viton® rubber. This amazing fluorocarbon rubber will not swell, or shrink and become brittle like the original fuel resistant gaskets.

Re-designed and improved fuel strainer drain cables are now manufactured by McFarlane. Dan McFarlane, one of the McFarlane owners, says "the stainless steel construction, larger diameter inner wire, and an aluminum knob has solved the corrosion and knob failure problems while reducing vibration wear issues. They are going to last longer and cost less."

McFarlane Aviation Products has provided general aviation with high quality replacement aircraft parts at an affordable price for over 30 years and were recently awarded the 2018 Kansas Governor's Award of Business Excellence!
